

ACTIVITIES

OUR PURPOSE

"Our main purpose is to raise people's awareness about the importance of preserving the marine wildlife in order that the future generations could enjoy and appreciate them"

LA NOSTRA ACTIVITAT

We collaborate with many research centres whose purpose is to encourage the protection and preservation of all marine ecosystems; taking advantage of the new technologies which let us observe our seas from the air, from the surface and even from the bottom of the sea.

Marine Biology

- Location and data of the deep corals and the surrounding ecosystems (madrepora oculata, lophelia pertusa, corallum rubrum, etc)
- Preservation of the threatened marine, animal and vegetal species.
- Location, census and tracking of cetacean from the sea and from the air.
- Research and documentation of invasive species.
- Analysis of the reasons of the increasing population of cnidarians or jellyfish
- Research on the marine ecosystems in the surroundings of wrecks in order to promote the protection of the threatened communities.

AREAS OF INTEREST

Whatever project that may be presented to us, must be framed in one of the areas that we are working with, and that are always connected with:

- The knowledge, respect and protection of the marine environment.
- The research, documentation, preservation and popularization of the marine environment and heritage

We consider projects of marine surface, but specially the ones which are connected with marine depths and underwater surface, to which we can reach thanks to the ROV technology which we are provided with.

Specifically, some of the areas of interest we have already been working in and to which we are open to in the future are the following:

Underwater culture heritage

- The development of deep underwater archaeology projects, always having the collaboration and criterion of the research centres legally authorized.
- Making up the census and the cartographic research of all underwater archaeological sites.

Sea stories

- Document life experiences from fishermen, sailors and people related to the sea, in order to promote its diffusion, helping to complete and enrich our marine heritage.

Marine pharmacology

- Collaborate with marine wildlife research's centres in order to get new and more efficient medicines.

Awareness and popularization campaigns:

- To the general public
- To fishing fleets
- To recreational skipper's boats
- To the diving centres
- To any student (school, high school, university, etc)

"We help to rise the knowledge, preservation, and diffusion of the sea, its depths, its ecosystems and its archaeological heritage by the means of last generation technologies."
